MB-3516 (6 volt 500mA) & MB-3517 (12 volt 350mAh) Sealed Lead Battery Chargers

These are 240V plug in power packs for charging lead acid batteries. They are fully automatic, in as much as they switch to trickle charge automatically when the battery is charged. This way you don't have to remember to switch them off after so many hours. There is a LED indicator, which has two different flash rates to show you what charging state it is in. Slow flashing indicates proper charging. Fast flashing indicates battery is charged and the charger is trickle charging the battery.

This advanced charger delivers 100% full charge to the battery. There are two chargers available, one 6V and one 12V. Both plug directly into a power point, have spade terminals on the output to slide onto battery terminals, and are Electricity Authority approved.

MB-3518 2, 6 & 12 volt Sealed Lead Battery Charger

This fully automatic charger plugs into a power point and will charge 2V, 6V, and 12V sealed, and standard (car) lead acid batteries. When the battery is completely charged, the current is automatically reduced to prevent overcharging.

Features:

- 600mA charging current
- Short circuit and wrong polarity protected
- Constant charging current
- No charge if battery connected incorrectly
- LED's for showing charging state, green for charging, red for battery terminals reversed.

Output lead has battery clips for easy charging. Ideal to trickle charge your car battery while on holidays or keep those SLA batteries charged and in tip top shape.
